Key Points

- IMF projects US real GDP growth to remain around the low-2% range through 2027 (2.1% in 2025; 2.3% in 2026; 2.1% in 2027).
- Nominal GDP is estimated at US$ 30.8 tn in 2025, rising to US$ 33.8 tn by 2027; GDP per capita is projected to increase from about US$ 90,000 (2025) to about US$ 98,300 (2027).
- Inflation is projected at 2.7% in 2025, with a temporary rise to 3.2% in 2026 before easing to 2.1% in 2027; unemployment is projected to remain around 4.2–4.4% (2025–2027).
- Fiscal metrics remain a key vulnerability: gross public debt is projected to rise from 123.9% of GDP (2025) to 128.6% (2027), with net lending/borrowing remaining around -7% of GDP.
- The current account is projected to remain in deficit (around -3.6% of GDP in 2025 and 2027), consistent with reliance on external financing and potential sensitivity in global capital flows.

DATA CAVEATS

- No Switzerland–US bilateral exposure data are included in this evidence pack (e.g., SNB bilateral services trade/FDI or WTO services series); the briefing therefore highlights channels of relevance without quantifying Switzerland's direct trade and investment exposure.
- IMF values for 2026–2027 are forecasts; earlier years are historical estimates as provided in the dataset
